KOIAS Lecture by Professor Jürgen Hasse at Kobe University

After last week's discussion about atmospheres, KOIAS Visiting Professor Jürgen Hasse, gave his KOIAS Lecture entitled "Space - a 15-fold differentiation", exploring the question of how manifold our conception of space can be. His focus was specifically on architectural and phenomenological space, trying to understand and describe it through manifold aspects such as mathematics, atmospheres, and the felt-body. The lecture was well attended by both KOIAS members and research students from the University of Kobe. The session ended with a discussion, as participants raised questions and comments about the work, and was also followed by a lively dinner aimed at celebrating Professor Hasse's time in Kobe.
